

## IT solutions for Industry

## Solutions and services

### About us

Since 1996 Onit Group has been performing its activity in the ICT sector, in management consultancy and process management with passion, courage and enthusiasm. Our company focusing on two values, **quality and reliability of services**, has grown into a team of over a hundred people organized in various departments: Industry, Healthcare, Business Intelligence, Mobile and ICT Services

Onit Group has set its corporate strategy on supply of software solutions and services targeted at design and optimization of industrial processes ranging from **integrated management of the supply chain** to **automation projects**, up to the control over **energy consumption** through the fully web-based platform called **On.Plant**.

**On.Plant** is the software platform by Onit Group for the management of production, quality, logistics, transport, automation and energy. **The software completely web-based, highly customizable and configurable**, simple but well structured, manages in real-time planning information, traceability, quality controls, energy consumption, logistic of manual and automatic storage and transport.

The system On.Plant is composed of **a suite of application modules** based on a **common framework application**, integrated with the main ERP software (e.g. SAP, AS400, sage, etc.).

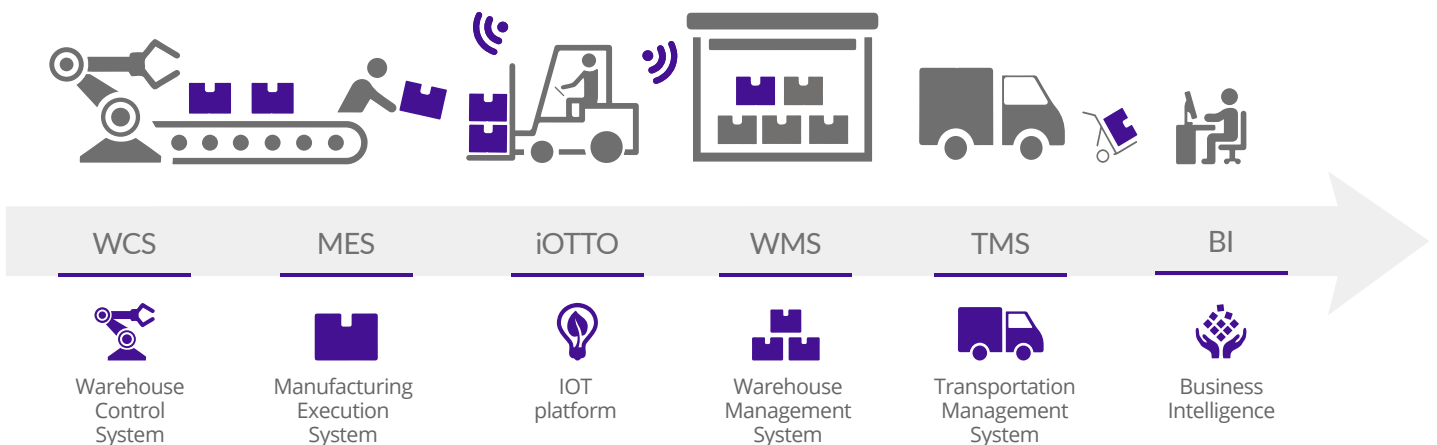

The single modules allow vertical integration on the corporate processes of each production sector and can be either installed **on premises** or provided with a Cloud Service.

Moreover, thanks to modern technologies, applications can **interact with devices used in the factory** (e.g. wireless terminals, printers, automatic readers, RFID, totem, weighing scales, etc.), **in automatic plants** (e.g. traslo-trucks, carousels, roller conveyors, etc.) or **in the company offices** (e.g. sensors, controllers, meters, Building Automation, etc.)

**OBJECTIVES**

- ✓ Cost Reduction
- ✓ Quality Improvement
- ✓ Increase in the level of automation
- ✓ Reduction of the times of stock
- ✓ Reduction of Errors
- ✓ Increase in Energy Efficiency

THE MODULES AND THE SERVICES ON.PLANT

DESIGN SERVICES

A characterising element of the activities that Onit Group offers to its customers is highly professional services in strategic areas: we believe that an **accurate planning** is the key to ensure the success of our IT solutions and that our goal is “understand before working”.

Our customers and partners can count on a **team of designers specialised in the analysis of processes, logistics and automation**. Their task is to identify the critical points and the limits of the structures and of the current processes, to propose new operating configurations designed to reduce costs, increase quality and energy efficiency and reduce the stock time, the kilometres travelled by the vehicles and errors.

There are two elements that are recognized in our design services: **professionalism and strategic orientation**. Thanks to our skills in the project context we can assure you that every single intervention will be framed in the strategy of general improvement of your business.
